Years goals

2023

In 2023 we have accomplished a new goal.

We have been able to collect from our donators and patreons **\$2.5bl** to invest in our fleet, green assets and research team.

In the last year an important goal has been met. The new green energy powerplant able to delivery **2.5MW** is fully operative in the Texas's desert, contributing to 2027 goal of green energy production expected to be **500MW**.

In the next quarters four new ships will enjoy our fleet, spiking up the garbage collection in our hearth's seas.

Netherless, **+5300** volunteers have joined our help call, contributing to our mission in the poor places of our world, where a poor education and low financial capabilities incentivate the production of emmissions and garbage.
